THE WORLD LEADER IN RODENT CONTROL TECHNOLOGY®

SUPERIOR PRODUCTS FROM THE WORLD LEADER IN RODENT CONTROL

As the world leader in rodent control technology, Bell Laboratories continues to provide leadership and stewardship for the rodent control segment of the pest control industry. Our focus is on quality, functionality and innovation.

Whether it is the development and production of innovative rodent control products, being at the forefront of regulatory issues, or developing new revenue opportunities for PMPs (such as providing rodent service for certified organic facilities using Terad3® Ag or residential baiting with the T1 Mouse™), Bell is committed to supporting the pest control industry.

PROTECTA TAMPER-RESISTANT BAIT STATIONS

From the toughest to most discreet baiting requirements, Bell offers PMPs a choice of versatile, tamper-resistant bait stations and anchoring systems to fit any situation.

UNIQUE RODENTICIDE BAIT FORMULATIONS

Bell Laboratories' complete line of rodenticides represents the widest range of rodent baits available anywhere. Bell's rodenticides contain only the high quality inert ingredients for maximum results. Bell's overall palatability and efficacy are proven in both laboratory and field settings.

TRAPPER GLUE AND MECHANICAL TRAPS

Bell has applied its vast knowledge of rodent behavior and engineering savvy into the development of an array of mechanical and adhesive trapping alternatives. Bell's glue formulations are the result of substantial research and testing to determine the ideal combination of immediate grip and stretchable hold, the two factors needed for the highest possible capture rate.

TALPIRID MOLE BAIT AND MOLE TRAP

TALPIRID® Mole Bait is a one-of-a-kind product that was developed after years of groundbreaking research. It is the first mole bait of its type designed, developed and scientifically proven to kill moles.

TALPIRID® Mole Trap incorporates the latest in mole trap technology. Built to withstand any soil type, it is the ideal complement to a complete TALPIRID program.

MANUFACTURING FACILITY

Bell is a vertically integrated manufacturing company. All of Bell's products are designed, tested and manufactured in its modern facility which houses its manufacturing operation, offices, and biological and chemical testing laboratories.

ENVIRONMENTAL STEWARDSHIP

Bell continues to work with conservation groups and government agencies around the world to rid ecosystems of invasive species and restore the balance of nature.

CHOOSING THE RIGHT BAIT

The level of rodent activity determines the appropriate bait for the job. It may be a new account with a heavy infestation, an existing account with persistent rodent activity, or a preventative program set up to monitor and keep rodents out. Proper selection and application of these baits will determine the success of the Rodent Control Program.

ACTIVE INGREDIENT:
BROMADIOLONE

CONTRAC®

BLOX, MEAL & SOFT BAIT

TYPE: Second generation anticoagulant

ANTIDOTE*: Vitamin K1 treatment

GENERAL ATTRIBUTES:

- Rodents may consume a lethal dose in one night feeding with the first dead rodents appearing four or five days after feeding begins.
- Rodents may continue to consume the bait even after ingesting a toxic dose

WHEN TO USE:

- For heavy infestations where there is strong food competition
- To control persistent infestations
- For occasional invaders to ensure they ingest a lethal dose in a single feeding

ACTIVE INGREDIENT:
BRODIFACOUM

FINAL®

BLOX, PELLETED & SOFT BAIT

TYPE: Second generation anticoagulant

ANTIDOTE: Vitamin K₁ treatment

GENERAL ATTRIBUTES:

- Rodents may consume a lethal dose in one night feeding with the first dead rodents appearing four or five days after feeding begins.
- Rodents may continue to consume the bait even after ingesting a toxic dose
- Higher toxicity than CONTRAC® baits

WHEN TO USE:

- For heavy infestations where there is strong food competition
- To control persistent infestations

ACTIVE INGREDIENT:
BROMETHALIN

FASTRAC®

BLOX, PELLETED & SOFT BAIT

TYPE: Acute

ANTIDOTE:

There is no direct antidote, however there are treatment programs available for sub-lethal ingestions

GENERAL ATTRIBUTES:

- Norway rats, Roof rats and House mice usually consume a lethal dose in a single night feeding, but it may take two or more days from the time of bait consumption for these rodents to die.
- Bait quantity may be about one-third that used with anticoagulants

WHEN TO USE:

- For heavy infestations where there is strong food competition
- To control persistent infestations

ACTIVE INGREDIENT:
DIPHACINONE

DITRAC®

BLOX, CAKE & TRACKING POWDER

LIQUA-TOX® II

TYPE: First generation anticoagulant

ANTIDOTE: Vitamin K1 treatment

GENERAL ATTRIBUTES:

- Multiple feedings typically required for the anticoagulant to be effective
- Generally more bait needs to be consumed to reach a toxic dose

WHEN TO USE:

- For maintenance control once population is restrained
- For monitoring any new activity

ACTIVE INGREDIENT:
CHOLECALCIFEROL

TERAD₃

TERAD₃ AG

BLOX

TYPE: Acute

ANTIDOTE: There is no direct antidote, however there are treatment programs available for sub-lethal ingestions

GENERAL ATTRIBUTES:

- OMRI listed (Terad3Ag)
- First EPA registered rodenticide for use in organic production
- Kills anticoagulant-resistant Norway rats

WHEN TO USE:

- For use in organic production (Terad3Ag) and structural control (Terad3Ag)

ACTIVE INGREDIENT:
ZINC PHOSPHIDE

ZP®

OATS, PELLETS & POWDER

TYPE: Acute

ANTIDOTE*:

There is no direct antidote, however there are treatment programs available for sub-lethal ingestions

GENERAL ATTRIBUTES:

- Restricted use product
- Proven palatability

WHEN TO USE:

- For economical cleanout of rodent infestations
- Use tracking powder when competing with natural food sources
