**PRODUCT FEATURES:**

- Specially formulated to appeal to the feeding preferences of mice
  - Excellent palatability and effectiveness for difficult mouse infestations
- Lower cost per placement
  - 15gm blox provide maximum baiting flexibility and the smallest legal block placement in the industry
- Mold and moisture resistant
  - Incorporates an advanced preservative system
- Full rodent label for application flexibility
  - While optimized for mice, Formus is also a very capable rodenticide for rats. Thus, it is registered and labeled for both mice and rats
Formus All-Weather Blox

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling. READ THIS LABEL: Read this entire label and follow all use directions and use precautions. Use only for the sites, pests, and application methods described on this label.

IMPORTANT: Do not expose children, pets, or non-target animals to residential use. To help prevent exposure:
1. Store unused product out of reach of children and pets.
2. Apply bait in locations out of reach of children, pets, domestic animals and non-target wildlife, or in tamper-resistant bait stations. These stations must be resistant to destruction by dogs and by children under six years of age, and must be used in a manner that prevents such children from reaching into bait compartments and obtaining bait. If bait can be shaken from bait stations when they are filled, units must be secured or otherwise immobilized. Stronger bait stations are needed in areas open to hooved livestock, raccoons, bears, or other potentially destructive animals, or in areas prone to vandalism.
3. Dispose of product container and unused, spilled, or unconsumed bait as specified on this label.

Note: Bait stations are mandatory for outdoor, above-ground use. Tamper-resistant bait stations must be used if children, pets, non-target mammals, or birds may access the bait.

REMEMBER: This product can be only used to control Norway rats, roof rats and house mice in and within 100 feet of man-made structures constructed in a manner so as to be inaccessible to commensal rodents' invasions and/or to harboring or attracting rodent infestations. Examples of such structures include homes and other permanent or temporary residences, food processing facilities, industrial and commercial buildings, traffic receptacles, agricultural and public buildings, transport vehicles (ships, trains, aircraft), docks and piers, terminal buildings, and related structures around and associated with these sites. Fence and perimeter barriers, beyond 100 feet from a structure as defined above, is prohibited. This product must not be applied directly to food or feed crops.

Baiting with Formus All-Weather Blox is prohibited.

Do not place near or inside ventilation duct openings. Do not contaminate water, food, feedstuffs, food or feed handling equipment, or milk or meat handling equipment or surfaces that come in direct contact with food. When used in USDA inspected facilities, this product must be applied in tamper-resistant bait stations. Do not broadcast bait.

Do not use this product in individual containers holding less than 16 pounds of bait.

SELECTION OF TREATMENT AREAS: Determine areas where rats or mice will most likely find and consume the bait. Generally, those areas are along walls, by swissed openings, in corners and concealed places, between floors and walls, or in locations where rats or mice or their signs have been seen. Protect bait from rain and snow. Remove as much alternative food as possible.

APPLICATION DIRECTIONS:
RATS: Place 7 to 30 blocks at intervals of approximately 15 to 30 feet in appropriate locations in infested areas. Maintain an uninterrupted supply of fresh bait for at least 10 days or until there are no longer signs of rats feeding on bait.

For use in sewers, thread wire through blocks and securely attach to a stationary structure such as the bottom step of a manhole ladder or a sewer grate. Allow just enough wire for the block to rest on manhole benchmark. If benchmark is not present, suspend blocks a few inches above the high water mark or secure blocks on a board supported by opposing steps of the ladder. Securing blocks in this manner may inhibit removal by rats or water. Use at least 20 blocks per manhole. Maintain an uninterrupted supply of fresh bait for at least 10 days or until signs of rat activity cease.

MICE: Place 1 block per placement. Space placements at 8 to 12 feet intervals in infested areas. Two blocks may be needed at points of very high mouse activity. Maintain an uninterrupted supply of fresh bait for at least 15 days or until signs of mouse activity cease.

FOLLOW UP: Replace contaminated or spoiled bait immediately. Wearing gloves, collect and dispose of all dead, exposed animals and behavior bait. To prevent reintroduction, limit sources of rodent food, water, and harborage as much as possible. Rats and mice do not usually die in the traps. Where a continuous source of infestation is present, establish permanent bait stations and replenish as needed.

PRECAUTIONARY STATEMENTS

Hazards to Humans and Domestic Animals
CAUTION: Hazard if swallowed. Causes moderate eye irritation. Keep away from children, domestic animals and pets. Do not get in eyes.

All handlers (including applicators) must wear shoes plus socks, and gloves. Any person who retrieves carcasses or unused bait following application of this product must wear waterproof gloves.

User Safety Requirements
Follow manufacturer’s instruction for cleaning/ maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry. Remove PPE immediately after handling this product. Wash hands before eating and before eating, drinking, chewing gum, using tobacco or using the toilet and change into clean clothing.

ENVIRONMENTAL HAZARDS

This product is extremely toxic to mammals and birds. Dogs, cats and other predatory and scavenging mammals and birds might be poisoned if they feed upon animals that have eaten this bait. This pesticide is toxic to fish. Do not apply directly to water, or to areas where surface water is present or to riparian areas below the mean high water mark. Runoff may also be hazardous to aquatic organisms in water adjacent to treated areas. Do not contaminate water when disposing of equipment wash water or waste.

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

Pesticide Storage: Store only in original container in a cool, dry place inaccessible to children and pets. Keep containers closed and away from other chemicals.

Pesticide Disposal: Waste resulting from the use of this product may be placed in trash or delivered to an approved waste disposal facility.

Container Handling: Non-returnable container. Do not reuse or refill this container.

Plastic: Offer for recycling or reconditioning or puncture and dispose of in a sanitary landfill, or by incineration. Do not burn, unless allowed by state and local ordinances.

WARRANTY: To the extent consistent with applicable law, seller makes no warranty, expressed or implied, concerning the use of this product other than those indicated on the label. Buyer assumes all risk of use and handling of this material when such use and handling is contrary to label instructions.

Formus All-Weather Blox
Kills Warmadest Ady Norwegian Rats And House Mice
Norwegian rats and house mice may consume a lethal dose in one night feeding with first dead rodents appearing four or five days after feeding begins.

ACTIVE INGREDIENT: Brodifacoum (CAS 54675-73-0) 0.005%
OTHER INGREDIENTS: 99.995%

KEEP OUT OF REACH OF CHILDREN
CAUTION
See site panel for additional precautionary statements.

FIRST AID

HAZARDOUS MATERIALS COMMUNICATION STANDARD

IF SWALLOWED

Call a Poison Control Center, doctor, or 1-877-545-2494 immediately for treatment advice.

IF IN EYES

Rinse eye open and rise densely and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes. Then continue rinsing eye.

Call a Poison Control Center, doctor, or 1-877-545-2494 immediately for treatment advice.

NOTE TO PHYSICIAN

Acute Toxicity: For ingestion, administer Vitamin K1 intramuscularly or orally. Vitamin K1 is antidote at doses of 10-20 mg (mg/kg). Repeat as necessary based on monitoring of prothrombin times.

TREATMENT FOR PET POISONING

If animal eats bait, call veterinarian at 1-877-545-2494 at once.

NOTE TO VETERINARIAN

Anticoagulant Brodifacoum: For animals ingesting bait and/or showing poisoning signs (bleeding or elevated prothrombin times), give Vitamin K1 at doses of 5-10 mg/kg. If needed, check prothrombin times every 3 days until values revert to normal (up to 30 days). In severe cases, blood transfusions may be needed.
